

## Sieza Peridect+ protects NCC premises

NCC is one of the leading construction companies in the Nordics. NCC builds schools, hospitals, roads, bridges, houses, offices and a lot more. In one of the storage facilities, fuel, work tools and even work machines were regularly stolen. Protection using only cameras was insufficient, so the customer decided on a combination of fence detection and CCTV. The main requirement was integration with the existing CCTV system from Partizan.

### Ticking the Boxes

- **Reliable detection**
- **Integration with existing Partizan CCTV system**
- **Various fences support**

The project was particularly challenging due to the different quality of the fence in different parts of the perimeter. It was necessary to ensure high sensitivity while eliminating nuisance alarms. This is possible due to the system's ability to adjust the sensitivity of each detector. With Onvif S support, Partizan IP cameras are automatically directed to the intrusion area, in case of an alarm. The customer gets an early indication of a burglar attempt. But no perimeter violations have been recorded since Peridect+ was installed.

### Spec list

- **1x CUP+**
- **1x IOP+**

- **1x LCP+**
- **1x IOP/EXP+**

- **168x DSP+**
- **600m of perimeter**
